

ABSTRACT OF THE DISCLOSURE

5 [0067] A portable foot bath has a reservoir for
holding a volume of liquid. The reservoir has a floor.
The foot bath also has a jet connected to a pump. A first
outlet is in a first location of the floor and a second
outlet is in a second location of the floor that is a
10 location different than the first location. The jet
circulates the liquid in the reservoir. The liquid goes
through the first outlet and the second outlet to create a
first whirling flow pattern and a second whirling flow
pattern, respectively, from the liquid in the reservoir.
